ABSTRACT:

A food <u>washing</u> apparatus of the invention includes an ozonized water generator (10), a cylindrical <u>washing</u> tank (1) in which the food materials are put and which can rotate to wash the food materials, a drainage part (4) formed at a part of the <u>washing</u> tank (1) and including openings to such a degree that water passes through and the food materials do not pass through, and wash water pipings (2, 9) which are inserted and disposed in the <u>washing</u> tank (1) in an axial direction and in which water spray holes (2a, 2a) for spraying wash water including at least ozonized water are formed, and while at least one part of the wash water sprayed from the wash water pipings (2, 9) is draind from the <u>washing</u> tank (1) every rotation of the <u>washing</u> tank (1), <u>washing</u> of the food materials is performed. Further, there is also a method in which a receiving tank (8) for wash water drained from the <u>washing</u> tank (1) is provided, and at least one part of the wash water in the receiving tank (8) is returned to an inlet side of the ozonized water generator (10) to perform cyclic use of the wash water.

US-CL-CURRENT: <u>134/25.3</u>; <u>134/131</u>, <u>134/134</u>, <u>134/32</u>

ABSTRACT:

A produce <u>washing</u> apparatus and method, which permits the <u>washing</u> of produce from both above and below in the field. The produce <u>washing</u> apparatus takes produce along a conveyor belt, from a loading section, to a <u>washing</u> section on which is located a <u>washing</u> unit, upward along an ascending section, and from there the produce travels along a dumping section and into a receptacle. The <u>washing</u> unit features spray nozzles located above and below the <u>washing</u> section, so as to direct spray from above and below the produce so as to more effectively wash it. The apparatus is preferably trailer mounted, so as to permit ready positioning in the field.

Record List Display

Systems and methods for harvesting fresh produce using a produce harvesting apparatus wherein the method includes trimming the fresh produce and placing the trimmed produce into a container. The container is placed onto a transport device located on the produce harvesting apparatus. The container is then transported on the transport device to a wash station and it is washed at the wash station. The container may be shaken during transport after the wash station.

TITLE: Horizontally-spinning and horizontal loading centrifuge and method for dewatering bulk materials in large volumes

DATE-ISSUED: May 3, 1994

INVENTOR-INFORMATION:

NAME CITY STATE ZIP CODE COUNTRY

Schnake; John L. Morgan Hill CA
Frye; Gordon D. San Jose CA

US-CL-CURRENT: 34/319; 34/182, 34/58, 494/84

ABSTRACT:

An embodiment of the present invention includes an open-ended, non-spinning housing, which is fitted with an inner lining that rotates within the housing at speeds sufficient to de-water material loaded from within and along the length of

hebbgeeefebefbe

the inner liner. A loading conveyor system has a discharge end that can be relatively positioned horizontally at various depths within the inner liner to deposit product at continuously variable layer depths on the inner liner while it is spinning. Once loaded, the inner liner is accelerated to a drying speed and the housing is swiveled to vertical on gudgeons. Once drying is complete, the inner liner is slowed down, or stopped, and the de-watered product can fall out to land on an unloading conveyor.
